FOREWORD

The Department of Water Resources, as Watermaster for the Central Basin, submits this annual report as a comprehensive review of water supply conditions in the Basin during the 1973-74 water year. This report was prepared for the Superior Court in the County of Los Angeles, and for the parties to the Central Basin Judgment, whose provisions authorize its publication.

The Central Basin is administered by the Department as a Watermaster Service Area in accordance with Part 4, Division 2, of the California Water Code. The Basin has been operating for twelve years under a well-defined management plan that limits and monitors ground water extractions.

This report contains information on ground water extractions, use of imported water, recharge operations, the administration of the Exchange Water Pool, and a financial report on Watermaster Service during the 1973-74 water year.

I. THE CENTRAL BASIN

The Central Basin is a large ground water basin underlying the southeastern part of the Los Angeles Coastal Plain. It is bounded on the north by the hills between the Central Plain and the San Gabriel Valley, on the east by Orange County, on the south and west by the Newport-Inglewood Uplift (Figure 1).

Most of the 227-square-mile Basin is urban-suburban and contains 23 incorporated cities. A substantial portion of the water needed by them is pumped directly from the Basin.

Twenty years ago an overdraft of the ground water resulted in declining water levels, triggering sea-water intrusion and threatening the ground water supply. But timely legal action halted it and prevented serious damage to the Basin. Today, ground water use in the Central Basin is restricted by a Superior Court Judgment and monitored by a court-appointed Watermaster, whose prime duty is to administer the controls prescribed by the Judgment and report annually to the Court and parties on significant ground-water-related events that occur in the Basin. The Basin has been under the Watermaster for twelve years.

History of Water Resources Development

One hundred years ago, the Los Angeles Coastal Plain was on the threshold of a boom. The key to its future was water.

But shortage of sufficient year-round surface water in the Central Basin forced the early development of ground water sources. As early as 1870, water users had tapped the artesian wells and springs east of the Newport-Inglewood Uplift. When those wells stopped flowing, users were forced to

drill shallow wells which supplied enough water to continue economic growth.

Ground water development spurted dramatically in 1909 with the advent of the deep-well turbine pump. Its tremendous adaptability and superior operating characteristics placed efficient water wells within economic reach of everyone. In time, reliable water supplies attracted industry and agriculture. Eventually however, the demand for ground water exceeded the natural replenishment of the Central Basin.

The resulting overdraft was signaled by dropping ground water levels and a few small areas of sea-water intrusion. The rapidly increasing cost of pumping and an occasional well failure because of dropping water levels were the chief economic cause of the Central Basin's serious ground water problem.

The deteriorating ground water situation in that Basin and the adjoining West Coast Basin led to the formation of the Central Basin Water Association in 1950. This led to a plan to:

1. Provide a supplemental water supply to major producers.
2. Limit ground water extractions from the Central Basin.
3. Create an exchange water pool to provide ground water pumping rights for water users lacking access to other supplemental water supplies.

Step 1 was realized in 1952 when the Central Basin Municipal Water District was formed to distribute water from the Colorado River. The

District was annexed to The Metropolitan Water District of Southern California (MWD) in 1954, and Colorado River water soon flowed into the Central Basin.

The West Basin and the Central Basin Water Associations were largely responsible for the creation of the Central and West Basin Water Replenishment District in 1959. This special District covers 420 square miles of the Central and West Coast Basins (Coastal Plain) of the Los Angeles County. Its objective is to replenish and maintain the ground water basins by purchasing imported water, recharging the Basin, and halting sea-water intrusion. The District financed this program during 1973-74 water year by placing a tax of \$11 during the first nine months and \$14 during the last three months on each acre-foot of ground water extracted within the District.

On January 2, 1962, the Central and West Basin Water Replenishment District filed Case No. 786,656 in the Superior Court, County of Los Angeles, naming more than seven hundred parties as defendants. It sought to obtain quiet title to the right to the use of ground water and to regulate withdrawals from the Central Basin to protect the water supply from deterioration.

Adverse ground water conditions, and the indefinite period before final adjudication, prompted the Central Basin Water Association to draft an interim agreement curtailing extractions from the Basin. By September 1962, the proposed agreement had been approved by a sufficient number of water producers (producers owning over 75 percent of the Assumed Relative Rights within the Basin) to guarantee control over ground water pumping in the Basin. On September 28, 1962, the Court signed the "Order Pursuant to Stipulation and Interim Agreement and Petition for Order" and appointed the Department of Water Resources (DWR) Watermaster.

To avoid the protracted litigation experienced in other Watermaster Service Areas in Los Angeles County, the attorneys representing principal parties held monthly meetings to work out a settlement. A stipulated judgment was drafted. Approval by public utility water companies and other producers represented well over 200,000 acre-feet (75 percent) of the total rights within the Basin. This was a prerequisite to filing the stipulated judgment with the Court.

A pretrial was held in March, 1965 and on May 17, 1965, the case went to trial before Judge Edmund M. Moor. After a week's testimony on engineering, geology, hydrology, safe yield of the Basin, and arguments on water right entitlements, the case was continued to August 25, 1965. Shortly thereafter, Judge Moor appointed DWR Watermaster. The final Judgment was signed on October 11, 1965, and became effective on October 1, 1966.

Watermaster Service

Watermaster Service is administered by DWR in accordance with Part 4, Division 2, of the California Water Code. Watermaster Service Areas are created by DWR, either at the request of water users or by order of the Superior Court. The first Watermaster Service Area was formed in September 1929. Currently, there are 20 such Areas controlling the surface water diversions in Northern California and 4 in Southern California controlling ground water extractions.

Once a month, every ground water pumper reports his extractions to the Watermaster. This makes possible updating of his water right account (Watermaster Production Summary) by computing the amount pumped during the previous month, the amount pumped during the current

water year, and the amount that can legally be pumped during the remainder of the year. A copy of the Watermaster Water Production Summary is mailed to the pumper each month.

If electric-meter readings are reported along with water-meter readings, electric-power consumption can be correlated with water production. Erratic or rapidly increasing electric-power consumption vs. water production, for instance, may suggest an inefficient pump, system losses, or an inaccurate water meter. In this manner the Summary occasionally indicates malfunction of pumps or water meters.

The Watermaster's field staff calibrates the water meter on every active water well at least once every two years. Accurate measurement of ground water extractions is absolutely necessary to the success of the Basin's management plan. All available means, including system efficiency tests, are used to confirm water-meter test results. One copy of each test is furnished to the well owner and inaccurate meters must be repaired within thirty days. Follow-up tests on repaired meters and initial tests on new wells are scheduled whenever necessary. Parties may also request a meter test at any time.

During the 1973-74 water year, the Watermaster evaluated historical ground water production records of several parties. All the reviews were routine and resulted in minor uncontested changes in the record.

Central and West Basin Water Replenishment District

The Central and West Basin Water Replenishment District (CWBRWD) is an active water conservation organization in Los Angeles County. The District is responsible for replenishing the underground water supply of both the Central and West Coast Basins.

The creation of water replenishment districts is a statutory procedure established by the Legislature. Division 18 of the California Water Code describes the duties and obligations of such a district, which has powers well suited to solving ground water problems, whether they be quality or quantity oriented.

CWBRWD is comprised of a Board of Directors and a small staff. It is actively engaged in several replenishment programs. These programs, i.e., water spreading, barrier operation, and in lieu replenishment, are described in this report. CWBRWD also publishes an annual report of its operations. (Additional information can be obtained from its staff, 7439 East Florence Avenue, Downey, CA 90240; 213-773-5790.)

The Watermaster cooperates closely with CWBRWD because: (1) Watermaster Service Areas in the Central and West Coast Basins closely coincide with the District boundaries; (2) both CWBRWD and the Watermaster are required to record all ground water extractions from the Basins; (3) CWBRWD was the plaintiff in the Central Basin Water Rights Case, (Case No. 786,656, Superior Court, Los Angeles County); (4) both CWBRWD and the Watermaster are concerned with the usefulness of the ground water basins in the Coastal Plain.

Many of the Watermaster's data collection programs are coordinated with the CWBRWD to prevent duplication. Hence, monthly or quarterly water well reports are mailed to CWBRWD and forwarded by it to the Watermaster.

Summary of 1973-74 Operating Conditions

Rain was almost normal (97 percent) and was 29 percent less than the year before. There has only been one wet year (1972-73) in the past five years. The subnormal concentrated rainfall in 1973-74 decreased by 34 percent the amount of local runoff that was conserved by spreading. Overall conservation efforts, excluding barrier operations, dropped by 16 percent.

Extractions of ground water increased by 3 percent after dropping to an all-time low in 1972-73. Extractions were less (6,000 acre-feet) than the total Allowed Pumping Allocation, as experienced in 8 of the last 12 years. Imports were up by 3 percent and have been fairly stable in the last 5 years. Exports were down 2 percent.

Water levels at key wells reflect a rise and stability of levels in the western-central area and a slight downward trend in the southern and eastern area of the basin.

Exchange Pool water requests decreased by 55 percent to 2,255 acre-feet. The price was \$50.90, based on the new price structure approved by the Court. There were 115 leases totaling 13,171 acre-feet and 39 sales totaling 1,715 acre-feet. Water-right sales have reduced the number of parties from 508 (1966-67) to the current 292.

Overextractions were at an all-time low (81 acre-feet) and number (22 parties). Six parties exceeded permissible limits; however, one requested permission of the Watermaster to exceed the limit and all six have taken steps to eliminate their overextractions. The Watermaster recommends no action by the Court.

Table 1 compares statistics for this period of record and the prior water year.

TABLE 1. SUMMARY OF OPERATING CONDITIONS
1972-73 and 1973-74

Item	Water Year	
	1972-73	1973-74
Parties	312	292
Active Pumpers	247	228
Active nonparties	19	19
Allowed Pumping Allocation, in acre-feet	217,367.00	217,367.00
Watermaster expenses	\$ 69,292.59	\$ 80,895.03
Watermaster expenses, per acre-foot pumped	\$.34	\$.38
Rainfall, in inches	18.95	13.42
Injection at barrier, in acre-feet	5,180.00	7,287.00
Spreading operation, in acre-feet	158,731.00	130,811.00
Extractions, in acre-feet	205,503.00	211,274.00
Imports, in acre-feet	182,331.00	187,430.00
Exports, in acre-feet	-34,887.00	-33,853.00
TOTAL WATER USE, in acre-feet	352,947.00	364,851.00

II. WATER SUPPLY CONDITIONS

Water from many sources is required to serve the needs of Southern California's thriving urban economy. Water from the Colorado and Owens Rivers, northern California, runoff from mountains, ground water, and reclaimed waste water contribute to one of the largest water supply systems in the world. Northern California water became available to the area during 1972-73.

Precipitation

Southern California enjoys a Mediterranean-type climate characterized by hot dry summers and sparse precipitation during the winter. The average rainfall on the Central Basin during 1973-74 was 13.42 inches. This is 97 percent of the

estimated 90 years normal rainfall on the Coastal Plain. The mean seasonal precipitation on the Basin (base period 1897-1947) varies from 12 inches at Long Beach to 16 inches at Whittier Narrows. The locations of the precipitation stations, used to measure rainfall, and the annual amount recorded are shown on Figure 2.

Local precipitation in the Basin does not influence the ground water supply of the Central Basin to any great degree. A layer of impermeable material lies between the surface and the producing aquifers, except in the forebay areas. As a consequence, very little of the annual rainfall reaches the zones whence it can be

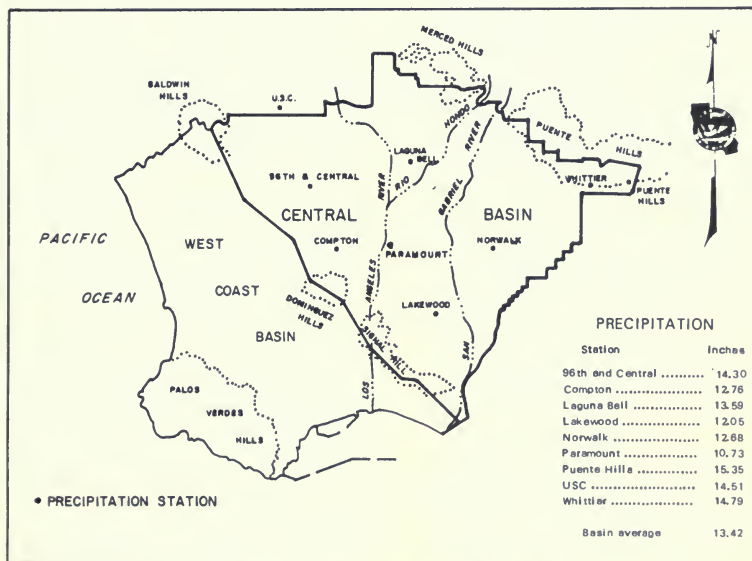

Figure 2. PRECIPITATION STATIONS

pumped back to the surface. Below normal rainfall (about 90 percent of normal) in the nearby San Gabriel Mountains reduced the runoff which was subsequently captured at the Whittier Narrows, when compared to the previous year.

Ground Water Recharge

Natural replenishment of the Basin's ground water supply is limited to inflow through Whittier Narrows (and some underflow) from the San Gabriel Valley. Some of the water that percolates into the forebay areas of the Central Basin eventually crosses the Central-West Coast Basin barrier and into the West Coast Basin. For several years, outflow and extractions have exceeded natural replenishment, thus upsetting the Basin's balance.

Today, attempts are being made to reestablish nature's balance. One method of artificial replenishment is water spreading. Water is flooded on areas where it can percolate into the underground aquifers and supplement the natural recharge supply. Large quantities can be returned to the ground by spreading, but the process is limited by the space available for spreading facilities and the ability of the recharge aquifers to transmit water back to the Basin.

The reduced quantities of runoff during 1973-74 resulted in a corresponding reduction in the amount of local runoff conserved. Storm runoff conserved was only 66 percent of the storm runoff conserved the year before, while the purchased water spread was 89 percent of amount purchased and spread last year. The total amount of supplemental water purchased was 3.4 times the local runoff.

The Los Angeles County Flood Control District (LACFCD) operates spreading grounds along the Rio Hondo and San Gabriel Rivers in the Montebello forebay of the Central Basin (Plate 1, pages 14-15). The entire spreading operation is summarized in Table 2.

TABLE 2. SPREADING OPERATIONS--a/

Water Source	Quantity (in Acft-Ft)	
	1973-74	1974-75
Local runoff	66,895 ^{b/}	79,796 ^{b/}
Included water:		
Whittier Narrows	13,422	13,436
San Jose	8,327	7,957
WSP water purchased: ^{c/}		
With CWPB Fund	71,467	99,000
By Contract	20,000	20,422
WSP water from Upper San Gabriel Basin	0	0
TOTAL	156,731	130,611

a/ Information provided by LACFCD as to amount actually spread is Montebello Forebay Area.
b/ Includes rising water.
c/ Amount purchased is slightly higher due to percolation losses, evaporation, etc.
d/ With Funds from Long Beach action.

Alamitos Barrier Project

The Alamitos Barrier Project, designed to prevent sea-water intrusion into the fresh aquifers of the Central Basin, is of great importance to water users in the Central Basin.

Sea-water intrusion at the mouth of the San Gabriel River (Alamitos Gap) poses a serious threat to the ground water supply. This area has seven water-bearing zones identified in downward order as the Recent aquifer, C-Zone, B-Zone, A-Zone, I-Zone, Main (Silverado) aquifer and Lower Zone (Sunnyside) aquifer.

Sea-water intrusion occurs through the Recent Zone, which is very permeable and open to the sea. The C, B, A, and I Zones merge with the Recent Zone and are therefore susceptible to intrusion, which is noteworthy for the varying degrees of salinity occurring in water found in each zone. The saline water intrusion was detected as far as 10,000 feet landward of the Newport-Inglewood fault zone and, if unchecked, could extend into the Silverado and Sunnyside aquifers, which are the principal ground-water-producing zones in the Basin.

LACFCD successfully operates a combination saline water extraction trough and freshwater pressure ridge to halt intrusion. In addition to the extraction wells and injection

wells required, a number of observation wells are also part of the project. These provide geological data along the barrier and are used to monitor ground water levels and water quality in this area. The information from this monitoring program will be utilized in determining if additional barrier facilities are necessary. Since operations of the barrier began in 1965, the sea-water intrusion problem has been effectively contained. The location of the barrier is shown on Plate 1, pages 14-15.

Water injected in 1973-74 was the maximum since injection started. Seventeen injection wells of the total 18 were in operation in 1973-74. The quantity of water extracted was the lowest in the past nine years of operation. Table 3 shows the scope of the project. In January 1973, water from the State Water Project was injected for seven days, otherwise Colorado River water has been used exclusively.

TABLE 3. BARRIER OPERATIONS^{a/}

Alamitos Gap Operation	Quantity
Quantity injected, in acre-feet	7,287 ^{b/}
Quantity extracted, in acre-feet	696
Average injection rate, cubic feet/second	10.06
Average extraction rate, cubic feet/second	0.96
Number of extraction wells	4
Number of injection wells	18
Number of observation wells	202
Wells to be added during 1974-75	
Injection	0
Extraction	1
Observation	0

^{a/} Furnished by LACFCD.

^{b/} Orange County Flood Control District participated in 16,000 of the cost of injected water during the 1973-74 water year.

Water Quality

The battle for good quality water in the Central Basin began many years ago. In fact, it was essentially a water quality problem that prompted the Central Basin litigation. Many of the aquifers underlying the Los Angeles Coastal Plain are separated from each other by impervious material. However, some of the aquifers are hydraulically connected to the ocean, so occasionally one or more adjacent aquifers may become impaired by sea water. If a well is drilled downward through two

aquifers, one clean, one polluted, without using proper casing techniques, water can move from the polluted aquifer to the unpolluted one.

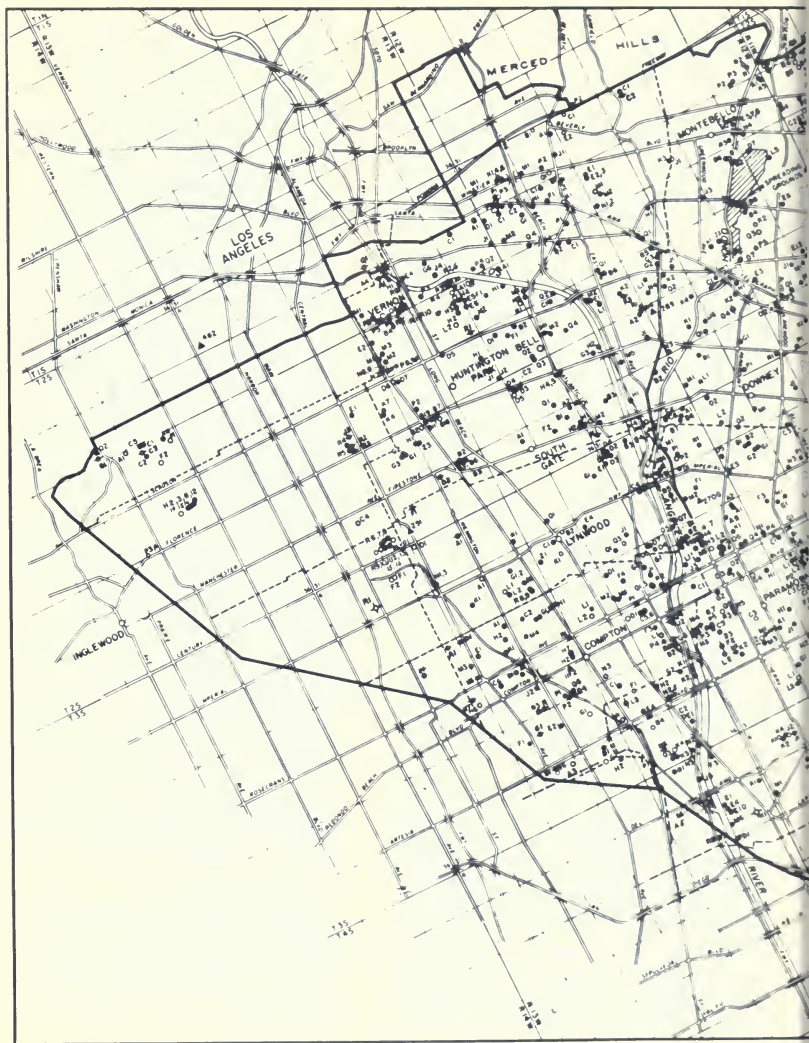

To prevent such occurrences, DWR conducted an intensive investigation that resulted in recommended standards for water well construction and destruction. Adoption hearings on these standards were held in 1969 by the California Regional Water Quality Control Board, Los Angeles Region, and it now reports that all local agencies and municipalities in the Central Basin have adopted them.

One of the most important pieces of legislation enacted by the 1969 Legislature was the Porter-Cologne Water Quality Control Act (Water Code, Division 7, commencing with Section 13000), effective January 1, 1970. This Act made extensive revisions in California's water quality control laws and is one of the most stringent in the nation.

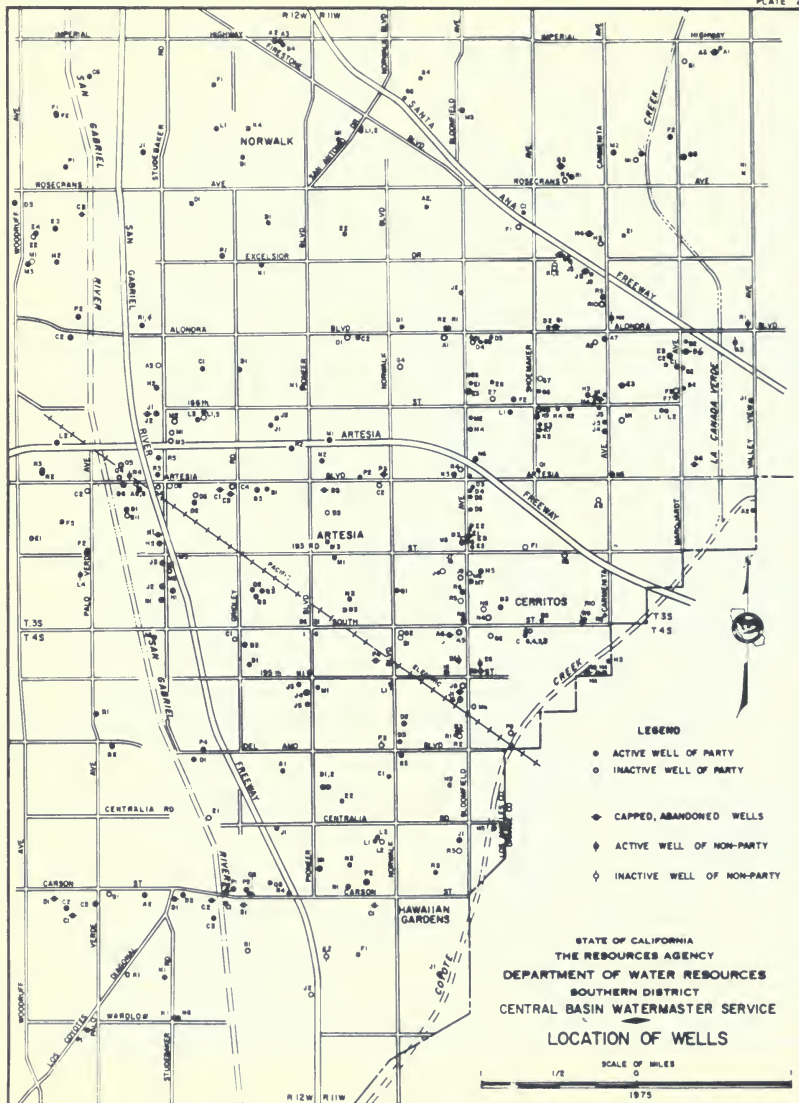

The Regional Boards can now enforce discharge requirements without showing the existence of conditions of pollution or nuisance. If a discharger violates requirements of the Boards and no action is taken to correct deficiencies in discharge, the Board may request enforcement by the Attorney General. Violations of a Regional Board cease-and-desist order could result in a maximum fine of \$6,000 for each day of violation.

Solid waste disposal has become a major problem in Southern California during the past 25 years. Today, the average Californian generates five

1/ DWR Bulletin No. 74, "Water Well Standards; State of California", February 1968; and DWR Bulletin No. 74-4, "Water Well Standards - Central, Hollywood, Santa Monica Basins, Los Angeles County", August 1968.

pounds of solid waste every day of the year that must be disposed of somewhere. Suitable dumpsites are becoming more difficult to find -- particularly in urban areas. In recent years, tremendous pressure has grown to use abandoned gravel pits as dumpsites.

Fortunately for water users, there is an intense, well-organized campaign against such practices throughout the Los Angeles area. CWBWRD, Central Basin Water Association, and various other agencies have vigorously opposed all applications for permission to operate sanitary landfill programs in the Central Basin. Opposition to the use of gravel pits as dumpsites will undoubtedly continue until fool-proof sealing methods are developed to prevent pollution of ground water by leachates.

A report published by the State Department of Health, Bureau of Sanitary Engineering, "Investigation of Ground Water Quality Problems in the Central Basin of Los Angeles", July 1968, catalogs many of the ground water quality problems that may already, or will in the future, face water users in the Central Basin.

Basinwide Water Quality Monitoring

In compliance with the Beilenson Health Act, the Central Basin Water Association initiated a basinwide plan to monitor the quality of water being pumped for domestic use. The requirements of the Act apply to each domestic water purveyor having 200 service connections or more. The plan as developed by the Association is a joint plan, which has been accepted and approved by the State Department of Health on November 9, 1973.

Title 17 of the Administrative Code, more particularly Part 1, Chapter 5, Subchapter 1, defines the limits of the trace elements and pollutants acceptable for domestic water use. To properly monitor trace elements and pollutants, 44 purveyors have agreed to participate in the testing by the Clinical Labora-

tories of San Bernardino. The City of Los Angeles and California Water Service Company have elected to perform their own testing; however, they will cooperate by furnishing their test results to the Association for inclusion in the report to the Department of Health. With acceptance of the Association's plan, five purveyors, who, because of the number of service connections are subject to the Act, have not indicated their desire to participate in the testing. The Association implemented the program in 1973-74.

In Lieu Replenishment

During the 1965-66 water year, CWBWRD began a program of in lieu replenishment. The program is authorized by Section 60230 of the California Water Code. In effect, CWBWRD was given the power to contract with any producer having access to supplemental water to have the producer use supplemental water instead of pumping water from the ground.

The California Water Service Company, in the West Coast Basin, has been thus far the only participant. The results of the program are summarized in Table 4.

TABLE 4. IN LIEU REPLENISHMENT PROGRAM^{a/}

Water year	Amount contracted (in acre-feet)	Contract price (dollars per acre-foot)	Total Payment
1965-66	744.59	\$ 12.33	\$ 9,180.79
1966-67	850.57	14.14	12,027.06
1967-68	850.00	13.36	11,356.00
1968-69	850.00	14.25	12,112.50
1969-70	899.88	15.32	13,786.16
1970-71	881.30	17.83	15,713.58
1971-72	755.55	20.01	15,118.56
1972-73	901.28	20.78	18,728.60
1973-74	901.32	13.69	12,339.07

^{a/} Information provided by CWBWRD.

The program may be used to: alter pumping patterns within a ground water basin; replenish areas of low transmissibility where conventional recharge techniques are ineffective; heighten the effect of injecting water to form a sea-water barrier by reducing extractions in the vicinity; reduce the amount of replenishment water purchased by CWBWRD; and reduce the annual ground water extraction from a ground water basin.

Construction Projects Affecting Water Supply

Three major projects have significantly affected the water supply of the Central Basin: The State Water Project, MWD's distribution system, and the second barrel of the Owens River-Mono Basin Aqueduct of the City of Los Angeles.

All have been completed within the past four years and are providing beneficial service to the Basin. MWD's Middle Cross Feeder began deliveries on December 1, 1972, and is the main source of Northern California water into the basin. Water from the State Water Project was approximately 3 percent of the total imported during 1973-74.

One other project of considerable interest to Central Basin water users is the

Los Angeles County Joint Sanitation District's plan to reclaim waste water. Considerable benefits from spreading reclaimed water in the forebay areas of the Central Basin may eventually materialize. Reclaimed waste water from the Whittier Treatment Plant is spread in the recharge basin. On or about November 15, 1972, the San Jose Treatment Plant began to supply reclaimed waste water for spreading in the Montebello forebay area.

Ground Water Levels

Every water-well owner in the Central Basin is concerned with the location of the ground water level since the cost of pumping water is largely dependent on the distance the water must be lifted.

Figure 3 shows water level information in the form of selected hydrographs. Location of these key wells are shown on Plate 1, pages 14-15. These hydrographs are representative of the several aquifers underlying the Basin. In general, they show that the water surface has stabilized and, in some cases, risen slightly because of recharge operations and changing extraction patterns.

Additional water level information is contained in CWBWRD's annual report.

Figure 3. FLUCTUATION OF WATER LEVEL ELEVATIONS
IN PRINCIPAL AQUIFERS

DEPARTMENT OF WATER RESOURCES SOUTHERN DISTRICT 1975

III. WATER USE

During the 1973-74 water year, water purveyors in the Central Basin served more than 365,000 acre-feet of water to their customers. The Basin contained 1,279 wells -- 713 active, 346 inactive, 18 injections, and 202 observation. Two were drilled and 31 were destroyed (Appendix C). The water service areas of the parties in the Basin are shown on Plates 3, 4, and 5, pages 22-27.

A rapid population increase in the Central Basin has caused water demand to increase substantially each year. Prior to 1961, ground water from the Basin satisfied most of the demand. However, the Judgment reduced extractions to 217,367 acre-feet annually, so imported water has rapidly become an important component of the area's water supply.

Figure 4 illustrates the ground water extractions and imported water use from 1952 to the present, less San Gabriel Valley imports. Much of the imported demand during the past eight years may be attributed to the curtailment of ground water extractions.

Figure 5 provides another graphic analysis of the monthly relationship between rainfall, ground water extractions, and imported supplies. Note how climatic conditions affect the demand.

Ground Water Extractions

The Central Basin Judgment limits the amount of ground water each party can extract annually (October 1 through September 30 of each year) from the Basin. This limit is referred to as the "Allowed Pumping Allocation" (APA). Recipients of exchange pool water may pump the amount released to them in addition to their APA. Table 5, pages 28 through 32, is a balance sheet summarizing each party's "water account".

The metered ground water production from each active well in the Basin is

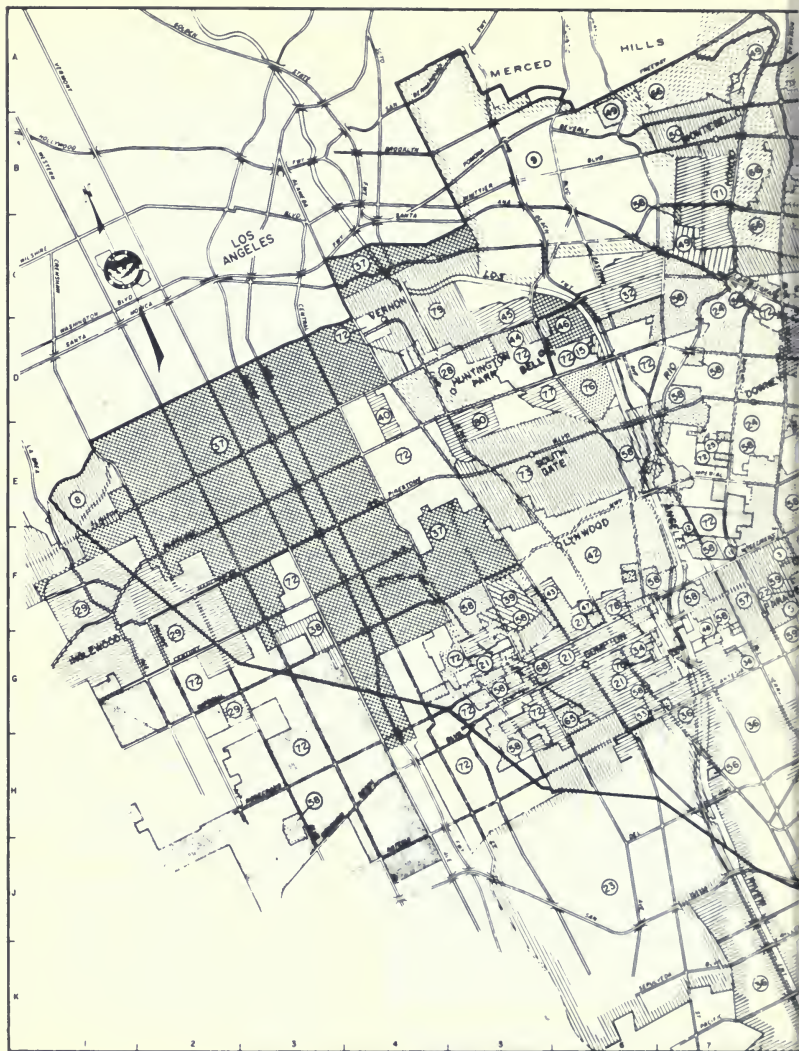

listed by party in Appendix B, Tables B-1 and B-2. Table B-1 lists parties that report on a monthly basis; Table B-2 lists parties that report on a quarterly basis. Normally, water wells producing more than 25 acre-feet per year must be equipped with a water meter and be reported monthly. Wells producing less than 25 acre-feet per year do not necessarily require a meter and may be reported on a quarterly basis. The location of the wells where ground water was extracted is shown on Plates 1 and 2, pages 14-16.

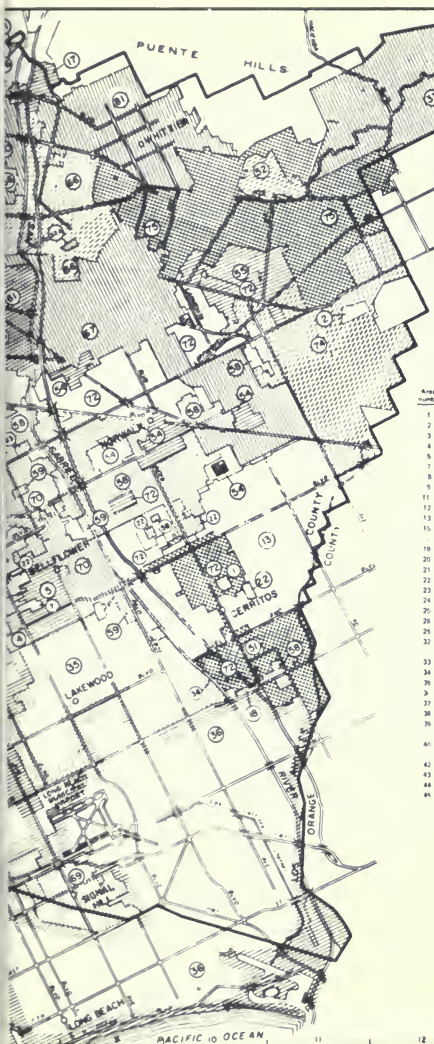

A numbering system designated as a State Well Number is assigned to all wells for identification. This system is explained in Figure 6, page 32.

To provide flexibility in the control of ground water extractions, the Judgment contains provisions allowing the parties to carry over into the succeeding water year a portion of their unused water right and in some cases to overextract. This flexibility was necessary to meet unforeseen emergencies in water demand.

One provision allows parties to carry over from one water year to another any unused APA not to exceed 10 percent of their APA or 10 acre-feet, whichever is greater. In addition, any unused exchange pool water can be carried over into the following water year. Chapter 4 contains additional information on this provision.

Parties are also allowed to overextract by 10 percent of their APA or 2 acre-feet, whichever is larger. Under certain circumstances, parties may overextract in greater amounts. However, prior approval of the Watermaster must be obtained and, in any case, must be made up the following water year.

- a/ See Table 10 and Appendix A for information concerning leases, revised water entitlements, or prior ownership.
 b/ Includes carryover of predecessors in interest.
 c/ Includes or transfers, wholly or partially, carryover flexibility right; see Table 10.
 d/ Includes extractions by predecessors in interest or tenant.
 e/ Production reported monthly as well as quarterly. See Appendix B, Tables B-1 and B-2.
 f/ Includes Exchange Pool water carryover.
 g/ Includes Exchange Pool water purchased by predecessor in interest.
 h/ Formerly Mary Corderro and First Western Bank and Trust Co.; name change only.
 i/ De Cordova well is used by Juan De Cordova, Southern California Edison Co. and Standard Brands Paint Co., Inc.
 j/ Water right leased by predecessor in interest.
 k/ The 1972-73 carryover was corrected.
 l/ Includes extraction from Lakewood Golf Course well by Los Angeles County Parks and recreations.
 m/ Los Angeles County has an interagency water right exchange whereby all water balances are combined and divided between the agencies in proportion to their needs on water right.
 n/ Meines well shared by William and Margaret Meines and Leo J. Mitsel.
 o/ Tenant of Continental Title Co. and Kotaka Bros.
 p/ Extracted by Kotaka Bros., tenant.
 q/ Includes extractions by Southern California Edison Co. - Substations.
 r/ The account of Otalia and Robert Nelson (-0.05 acre-foot) has been closed and is not included in this total.

Water Well Identification

State Well Numbers that identify each water well in the Central Basin are derived from a system based on the U. S. Public Land Survey. Each number consists of township and range designation, a section number, a letter representing the 40-acre tract in which the well is situated, a sequence number indicating the chronological

order in which the well number was assigned, and a letter representing the base and meridian. The last letter is frequently omitted from well numbers in a single area because all wells there share a single base and meridian. Well numbers are assigned by the Watermaster.

The components of well No. 3S/11W-12C03S, for example, are identified in Figure 6.

Extractions by Nonparties

To keep the parties and the Court apprised of all ground water extractions within the Central Basin, the Watermaster collected information on nonparty ground water extractions shown in Table 6. The nonparties were not named in the Central Basin Judgment and as such are not under the jurisdiction of the Watermaster. During 1973-74, two nonparties previously reporting extractions discontinued pumping and two began pumping.

Imported and Exported Supplies

Large quantities of water are imported to the Central Basin from other sources. Water from the Colorado River and State Water Project arrives through MWD's facilities for distribution throughout the Basin by the Cities of Long Beach, Los Angeles, Compton, the West Basin

Municipal Water District, and the Central Basin Municipal Water District. The City of Los Angeles also imports water from the Owens River-Mono Basin in east Central California. In addition, the City of Inglewood imports ground water from the West Coast Basin, California Domestic Water Company, San Gabriel Valley Water Company, Suburban Water Company, and the City of Whittier import ground water from the San Gabriel Basin.

Exports from the Central Basin are very small as compared to imports. The City of Long Beach exports blended ground water, Northern California water and Colorado River water to the West Coast Basin, while the California-American Water Company, Dominguez Water Company, and the City of Signal Hill export ground water to the West Coast Basin. Imports and exports are listed in Table 7.

a/ Does not include imported water for spreading.

b/ Delivered for use in the Alameda Barrier Project.

c/ Includes 1,622 acre-feet of northern California water.

d/ Includes 2,983 acre-feet of northern California water.

e/ Includes 618 acre-feet of northern California water.

f/ No northern California water was purchased.

IV. ADMINISTRATION OF THE JUDGMENT

The Central Basin Judgment was a logical step toward preserving the usefulness of a valuable natural resource. It provides a flexible tool to limit extractions and still allow beneficial use of the ground water supply. However, restriction on extractions imposed by the Judgment forces the parties to look for other supplies. Fortunately, these are available. If they were not, the rapidly increasing demand for water might literally bankrupt the Basin before other basin management techniques could be developed.

Exchange Pool

The Court and parties foresaw that adjudicating the water rights in the Central Basin and limiting the total extraction would not suffice all parties. For this reason, Part III, Subpart C of the Judgment authorizes an Exchange Pool to provide additional water rights for parties without a supplementary supply. Tables 8 and 9 summarize the 1973-74 Exchange Pool transactions.

Membership in the Exchange Pool is voluntary, and any party may join by filing with the Watermaster and the Court a "Notice of Intention to be Bound by the Exchange Pool". This notice is also contained on the Exchange Pool Offer or Request form.

On or about September 30 of each year, the Watermaster mails an Exchange Pool form to each party, requesting that the form be completed and returned to the Watermaster by November 10. The form provides for making: mandatory offers of water rights to the pool, referred to as "Required Subscription" in the Judgment; "Voluntary Subscription"; and requests for water rights from the pool. In completing the form, the member must estimate his water needs and supply for the ensuing water year.

^{b/} Was a party when the Pool was open for requests, see Appendix A.

However, the Watermaster must first allocate all the Required Subscriptions before using the Voluntary Subscriptions in filling Category (a) Requests.

A Category (a) Request is defined as that quantity requested by a member not in excess of 150 percent of his Allowed Pumping Allocation, or 100 acre-feet, whichever is greater. Category (b) Requests are those which exceed the 150 percent, or 100 acre-feet, limitation. Whenever there are insufficient Required Subscriptions to meet all Category (a) Requests, Voluntary Subscriptions may be used in lieu of Required Subscriptions. Category (b) Requests are filled exclusively by Voluntary Subscriptions.

Experience has been such that there have always been sufficient Required Subscriptions to meet all the Category (a) Requests; as a result, no Voluntary Subscriptions have been used to fill Category (a) Requests. It is doubtful whether Voluntary Subscriptions will ever be used to meet Category (a) Requests. Consequently, very few Voluntary Subscriptions are used in the Central Basin Exchange Pool. The only instances where Voluntary Subscriptions are used are in cases where requests exceed the 150 percent, or 100 acre-foot, limitation.

During the 1973-74 water year, there were no members to the Exchange Pool whose requests met these criteria.

A Request for Exchange Pool water right may be made when a member's estimated needs exceed his total supply, including leases.

The price charged for Exchange Pool water rights is fixed by Part III, Subpart C, Paragraph 10 of the Judgment. This provision was amended by Court order on September 28, 1973, and became effective in 1973-74. A copy of the amendment was reproduced in Appendix D of the 1972-73 annual report.

A Required Subscription must be made to the pool when a member has a connection to supplementary water and can obtain imported water from MWD or the Central and West Basin Municipal Water Districts. The Required Subscription is limited to 20 percent of the member's Allowed Pumping Allocation; except that the Required Subscription, plus the party's water needs for the year, cannot exceed the party's total supply.

A Voluntary Subscription may be made by any member of the Exchange Pool. The only requirement: The member's supply must exceed his estimated needs and only the difference may be offered.

The price is now based primarily on: (a) the type of imported MWD water used by the Exchangors during the preceding fiscal year (July 1 - June 30); (b) the cost of such water, predicated on the average price to be charged by CEMWD during the water year for each type of water; (c) plus \$2 fixed fee; (d) less \$8, which is the estimated average incremental cost of pumping water in the basin; and (c) less the current replenishment assessment, \$11 in 1973-74. Since item (a) varies among Exchangors and items (b) and (c) vary from year to year, the cost of Exchange Pool water will likewise vary among Exchangors and from year to year. The Exchangor's Exchange Pool price is averaged to determine the Basinwide price. The 1973-74 price, referred to as the Basinwide Average Exchange Pool Price, was \$50.90.

Payments for Exchange Pool water rights are made in four equal monthly payments. The first payment is due the Water-master on or before December 31 and the remaining three payments on or before the last day of the next three succeeding months. After all payments are received for each month, the Water-master then disburses the corresponding amount to the parties whose offers were sold.

Exchange Pool Carryover

The Central Basin Exchange Pool provides additional pumping rights to parties at a relatively high price. The authors of the Judgment therefore believed that the parties should be allowed to pump their entire exchange water right purchases regardless of the provisions limiting carryover of water rights. Therefore, a specific exchange water carryover provision was drafted and included in the Judgment.

The provision specifically allows a party who purchased exchange water to carry over the unpumped portion of his allowable extraction until all of the exchange water is pumped. Table 10

lists each party who carried exchange water into the 1973-74 water year, the amount of water carried forward, and the additional costs. The charge is authorized by the Judgment and is based on the difference in the prices of exchange pool water between the year the water was purchased and the succeeding year. Table 5, page 28, also shows those parties having a carryover of exchange water from the 1973-74 to the 1974-75 water year.

Transfers of Allowed Pumping Allocations

The Central Basin Exchange Pool is not the only method of obtaining additional pumping rights. Each water year, there are a number of water right lease and sale transactions between parties. Table 11 lists leases, sales, parties, and amounts involved.

c/ Includes 127.22 acre-feet of Powerline Oil Company. See text.

d/ Includes \$3.37 which was waived pursuant to Footnote a/ and \$40.94 which was subsequently refunded to Powerline Oil Company. See text.

Appendix A also records all sales of water rights between parties and shows the current ownership of Allowed Pumping Allocations by each of the parties as of September 30, 1974.

Suggested samples of water right lease and sale agreements are illustrated in Figure 7. The Watermaster recommends that all documents be prepared on an 8-1/2 x 11-inch sheet of paper. Any necessary additions to the recommended agreement may be attached to another page. You need not use these sample documents, but they are sufficient for most purposes.

The "General Information, Policies and Procedures" of the Watermaster Service in the Central Basin has been revised to read as follows:

"In order that a water right lease be in force (applicable) during a particular water year, it must have been executed by the parties involved before or prior to September 1 of the water year in question. In addition the executed water right lease document must be filed with the Watermaster no later than August 31 or postmarked August 31 of the year in question. Any otherwise valid agreement not filed with the Watermaster prior to September 1 of the water year in question will be void and of no force or effect for the transfer of water rights."

When property, on which water rights have been developed is sold, the Watermaster must be furnished a copy of the sale document. The sale docu-

*Includes or transfers carryover flexibility right.				

ment is required for the proper accounting of the water rights. The Water-master assumes that the water rights pass on to the new owner unless specifically reserved in the sale document.

In leasing, buying, or selling water rights, parties should be specific as to the type being exchanged, i.e.,

Total Water Right of Allowed Pumping Allocation. All leases should be entered into on the basis of Allowed Pumping Allocation, whereas sales should specify both amount of Total Water Right and amount of Allowed Pumping Allocation, each to the nearest whole acre-foot. All water right leases should be made on a water year

basis, i.e., October 1 through September 30 of the following year.

Overextractions

Each year some parties extract more ground water from the Central Basin than they are entitled to. The overextractions are usually small, within the tolerance set by the Judgment. Each party may overextract by 2 acre-feet, or 10 percent, of his allowed Pumping Allocation, whichever is greater, on the premise that the overextraction will be eliminated during the following water year. Any overextractions above this limit must have prior approval by the Watermaster. Most overextractions are caused by unexpected increases in water demand, so it would be unreasonable not to allow some deviation from the limits and guidelines of the Judgment. Table 12 summarizes all overextractions during the 1973-74 water year.

Of the 22 parties listed, 16 did not violate the provisions in the Judgment pertaining to overextractions; 5 overextracted in violation of the Judgment; however, all have taken steps to eliminate their overextractions; and 1 has requested permission and obtained approval to overextract.

The Watermaster recommends that no action be brought against those parties who overextracted, as they have all taken steps to eliminate their overextractions.

Findings and Determinations by Watermaster

WITH RESPECT TO EACH PARTY LISTED ON TABLE 12 CONTAINED IN THIS PORTION OF THE REPORT ON "OVEREXTRACTIONS", THE AMOUNT SHOWN IN COLUMN 6 CONSTITUTES THE QUANTITY OF WATER IN ACRE-Feet BY WHICH THAT PARTY HAS OVEREXTRACTED GROUND WATER FROM THE CENTRAL BASIN IN EXCESS OF THE QUANTITIES PERMITTED TO IT UNDER AND PURSUANT TO THE JUDGMENT IN THE CENTRAL AND WEST BASIN WATER REPLENISH-

MENT DISTRICT, PLAINTIFF, VS. CHARLES ADAMS, ET AL. DEFENDANT, CASE NO. 786,656, LOS ANGELES SUPERIOR COURT. EACH SUCH PARTY'S ALLOWED PUMPING ALLOCATION FOR THE WATER YEAR 1974-75 AS SHOWN IN APPENDIX A OF THIS REPORT, IS REDUCED BY SAID QUANTITIES SHOWN IN COLUMN 6, PURSUANT TO THE PROVISIONS OF PART III, SUBPART B, PARAGRAPH 3 OF THE JUDGMENT, EXCEPT INsofar AS THAT PARTY HAS ORDERED AND HAS BEEN ALLOCATED EXCHANGE POOL WATER FOR THE WATER YEAR 1974-75. THE FOREGOING STATEMENTS CONTAINED IN THIS PARAGRAPH CONSTITUTE A DETERMINATION AND FINDING BY THE WATERMASTER PURSUANT TO THE PROVISIONS OF PART II OF SAID JUDGMENT.

From time to time the Watermaster evaluates historic ground water production records of parties at the request of the parties or at the Watermaster's discretion. In some instances, the evaluations and findings result in minor uncontested changes in the records to the benefit of the party or vice versa.

The administration of the Judgment was hampered to a degree by the failure of a number of parties in submitting their production reports to CWBWRD by the prescribed date. The "General Information Policies and Procedures" bulletin, published by the Watermaster and mailed to all the parties, sets the deadline for submitting the reports as the 15th of the month for the water pumped during the preceding month.

Carryover of Allowed Pumping Allocation

The provision in the Judgment (Subpart A, Part III) relative to allowable carryover of unused water rights states in part: "Each party ... who ... does not extract ... a total quantity equal to such party's Allowed Pumping Allocation for the particular water year ... is permitted to carry over from such water year the right to extract from the Central Basin in

a/ Computed as 2 acre-feet or 10 percent of (1) Allowed Pumping Allocation (Column 1) plus (2) amounts indicated by footnote d/, whichever is larger.

b/ Advised by the Watermaster on July 31, 1974, of possible overextractions.

c/ Carryover flexibility right included as follows: Laguna-Maywood Mutual Water Company No. 1 (+ 110.00 acre-feet); Southern California Water Company (+ 170.00 acre-feet); and Bennett S. Simmons, et al (- 80.00 acre-feet).

d/ Permission to exceed permissible overextraction requested of and approved by the Watermaster. Party has taken steps to eliminate its overextraction.

e/ Party did not request permission to exceed permissible overextraction and is in violation of the Judgment. However, it has taken steps to eliminate its overextraction.

the next succeeding water year so much of said total quantity as it did not extract ..., not to exceed 10% of such party's Allowed Pumping Allocation, or 10 acre-feet, whichever ..., is the larger." (Emphasis added.)

The method of computing the allowable carryover and allowable overextractions was changed effective with the 1972-73 water year. It is now assumed that when not specifically passed to the

lessee by the lease document, the amount leased is not deducted from the lessor's Allowed Pumping Allocation for computing the allowable carryover or overextraction. All future lease documents must contain a statement as to which party receives the benefit of the amount leased for computing carryover or overextractions. Item (5) in Figure 7, suggested Water Right License and Agreement (page 38) is sufficient for this requirement.

V. ADMINISTRATIVE COSTS

The Central Basin Area was established as a "Watermaster Service Area" in accordance with Part 4, Division 2, of the Water Code of the State of California. Therefore, as provided under Section 4201, the cost of administering the service area and the distribution of water therein is payable one-half by the State and one-half by the parties.

Cost of Watermaster Service for 1973-74

The Judgment requires that the Watermaster prepare and mail a copy of the tentative budget to each of the parties at least 60 days before the beginning of each water year. If no objections are received within 15 days after service of the budget, it becomes final.

The tentative budget submitted to the parties on July 31, 1973, is presented in Table 13. There were no objections and it was adopted as the final budget on August 15, 1973.

The administrative cost chargeable to the parties was apportioned among the parties as directed by the Judgment. The Judgment provides that if the portion of the final budget payable by the parties is equal to, or less than \$5 per party, the cost shall be equally apportioned among the parties. However, if the parties' share of the budget is greater than \$5 per party, each party will be assessed a minimum of \$5 and the total amount so collected will be deducted from the parties' share of the budget. The balance to be collected is then assessed among the parties in proportion to their Allowed Pumping Allocation in excess of 65 acre-feet.

Apportionments of parties' share of the budget for the water year 1973-74 are set forth in Table 14. A five percent penalty is assessed if payments become delinquent. In this respect, 21 parties were penalized as their payments were not made

within the allowable 30 days after service of the statement of the amount due. Assessments totaling \$9.24 were collected for delayed payments.

Chapter IV presents information on Exchange Pool water carryover. This provision directs the Watermaster to bill and collect from those parties having a carryover of Exchange Pool water the difference in price per acre-foot (\$2.90) for Exchange Pool water when the price in the succeeding water year (\$50.90) exceeds the price of the previous year (\$48.00). A total of \$6,410.88 was collected for Exchange Pool water carried over from the 1972-73 water year to the 1973-74 water year. See Table 10 (page 37) for a detailed breakdown. These additional payments are considered miscel-

laneous income to the Watermaster and are applied towards that share of the Watermaster's budget to be paid by the parties.

In addition to the above-mentioned receipts, \$17.10 was collected for delayed payments in the operation of the Exchange Pool. The penalties were assessed in accordance with Exchange Pool procedures and the additional miscellaneous income thus collected was applied towards the parties' share of the budget.

Income and expenditures for watermaster service during the 1973-74 water year are shown in Table 15 below. Any credit or debit balance is carried forward into the succeeding water year.
